SUMMARY

I like building products that feel simple, even when the problems behind them aren't.

I've spent most of my career at early-stage companies and enjoy owning the frontend, partnering closely with design and product, and sweating the details that make software feel polished. Frontend is where I go deepest, but I'm always happy to contribute across the stack when it helps move the product forward.

Lately that means React, TypeScript, GraphQL, anything TanStack, and AI-assisted development.

SOLO PROJECTS

Recur

📅 01/2026 - Present

🔗 <https://recur.fit>

Recur is a strength training app for adults whose schedules, bodies, and motivation don't always line up. It builds workouts around the equipment you have, adjusts when you're coming back from time off, and works around areas giving you trouble (knees, lower back, shoulders, etc.).

Technologies: React Native, Tamagui, Tanstack Query, Zustand, Supabase, Biome, GitHub Actions

EXPERIENCE

04/2026 - Present

Austin, TX

● Staff Software Engineer

ZenBusiness

- Own pricing and packaging for the business formation funnel. Consolidated three overlapping legacy versions into one platform funnel, retired three dead acquisition funnels, and run the pricing experiments that go through it.
- Contributed to the company's AI assistant allowing for an embedded checkout experience and extending the agent's purchasing ability into new product areas.
- Modernized the frontend toolchain and CI across the team's multiple React applications, replacing the linter and formatter and clearing a backlog of dependency updates.
- Made the end-to-end test suite trustworthy again, cutting failures by about 70% and letting it run fully in parallel.

10/2022 - 04/2026

New York, NY

● Lead Software Engineer, Frontend

Baton

- Joined as one of Baton's early engineers and established the frontend architecture, selecting the core technologies and patterns for routing, data fetching, component architecture, testing, and the design system.
- Led development of the customer-facing marketplace as Baton grew from MVP to tens of thousands of users, building business valuations, buyer and seller dashboards, search, payments, and onboarding.
- Built an internal admin platform from scratch, giving the operations team a single place to manage businesses, listings, users, and marketplace workflows.
- Rebuilt the frontend data layer around GraphQL and TanStack Query, simplifying data fetching, reducing frontend complexity, and making new feature development faster.
- Partnered closely with product and design to launch self-serve onboarding with embedded Stripe payments, reducing customer onboarding from days to hours.
- **Technologies:** React (Remix/Next), Typescript, Tanstack (Start/Router/Query/Table/Form), GraphQL, Vitest, Testing Library, Cypress, Playwright, Chakra UI, MJML, Contentful, GitHub Actions

EXPERIENCE

11/2020 - 10/2022

Santa Monica, CA

● Senior Frontend Engineer

Sure

- Maintained and enhanced a multi-tenant platform used by enterprise customers for managing policies, quotes, and content, including a document builder and headless CMS tools.
- Built a schema-driven frontend architecture that enabled backend-configured claims and benefits workflows, eliminating the need to build and maintain dozens of custom React form flows.
- Partnered closely with product, design, and backend teams to deliver enterprise-specific experiences while maintaining a shared platform architecture.
- **Technologies:** React, Typescript, React Query, GraphQL/REST, Jest/React Testing Library, Cypress, CSS-in-JS, Git, NPM, CircleCI.

10/2019 - 11/2020

Costa Mesa, CA

● Manager, UI Engineering

Happy Money

- Provided architectural direction for an early design system used across web and native applications, improving consistency and speed of UI development.
- Supported and guided a small UI engineering team through implementation work, code reviews, and shared component patterns.
- Collaborated with product, design, and data science to unify UI patterns and create cohesive user experiences across platforms.

04/2019 - 10/2019

Costa Mesa, United States

● Senior UI Engineer

Happy Money

- Led UI development for a React Native mobile application, owning core interface architecture and collaborating closely with backend and design teams.
- Built a shared React Native component library that reduced duplication and improved development speed across teams.
- Worked closely with design to translate patterns into reusable components and ensure consistent interactions across platforms.
- **Technologies:** React/React Native, Styled Components, Git, Bitbucket.

09/2018 - 04/2019

Southfield, MI

● UI Developer

Bluewater

- Built web app interfaces for immersive digital installations at live events and trade shows.
- Developed landing pages and marketing websites using Gatsby, Styled Components/SCSS, Netlify, Butter CMS, and Pardot.

08/2015 - 08/2018

Detroit, MI

● Senior UI Developer

LevelEleven

- Built and enhanced JavaScript applications within the Salesforce ecosystem using React/Backbone, PostCSS/SASS/LESS, and modern JS tooling.
- Created and maintained a React/NPM component library used across LevelEleven's apps.

07/2013 - 08/2015

Pleasant Ridge, MI

● Interface Developer

HelloWorld, Inc.

07/2008 - 07/2012

Hazel Park, MI

● Web Manager

NexaMotion Group

TECHNOLOGIES

React (Remix/Next/Gatsby)

Typescript

Chakra UI / Tailwind

Framer Motion

GraphQL / REST

Tanstack (everything)

Vitest / Cypress / Playwright

Claude Code / Cursor

Contentful / Dato CMS
